

Requirement-to-Development Handoff Automation

Business Context

A software company delivers multiple custom software projects every month.

Business Analysts collect requirements through client meetings, emails, and workshop notes. The information is often scattered across documents, resulting in:

- Missing requirements
- Inconsistent user stories
- Inaccurate estimations
- Delays in project initiation

Currently, Project Managers manually create project tracking spreadsheets and backlog documents, consuming several hours for every new project.

Management wants an AI Agent Skill that automatically converts requirement inputs into structured project artifacts and updates the team's project repository.

Business Goal

Automate the process from requirement gathering to a development-ready backlog.

The AI Agent should:

Meeting Notes / Client Requirements

Requirement Analysis

PRD Generation

Epic Creation

User Story Creation

Acceptance Criteria

Effort Estimation

Google Sheet Population

Development Ready Backlog

Agent Skill Objective

Build a Process Automation Skill called:

Project Initiation Assistant

The skill automates project onboarding and backlog preparation.

Inputs

Option 1

Raw meeting notes

Option 2

Client requirement document

Option 3

Voice transcript

Outputs

Generated Documents

- Project Vision
- PRD
- Epic List
- User Stories
- Acceptance Criteria
- Initial Estimates

Automated Actions

Create a Google Sheet in a designated Google Drive folder and populate:

Sheet: Project Overview

Field	Value
Project Name	
Client	
Objective	
Priority	

Sheet: Epics

Epic ID	Epic Name	Description
---------	-----------	-------------

Sheet: User Stories

Story ID	Epic	Story	Priority	Story Points
----------	------	-------	----------	--------------

Sheet: Risks

Risk	Impact	Mitigation
------	--------	------------

Skills to Build

Skill 1 – Requirement Analyzer

Extract:

- Goals
- Stakeholders
- Functional requirements
- Constraints

Skill 2 – PRD Generator

Create structured PRD.

Skill 3 – User Story Generator

Generate:

As a ...

I want ...

So that ...

Skill 4 – Backlog Estimation Assistant

Assign:

- Story Points
- Priority
- Complexity

Skill 5 – Google Sheet Project Tracker Creator

Actions:

1. Create project spreadsheet
2. Create worksheets
3. Populate data
4. Share with project team
5. Return spreadsheet URL

Technology Stack

The skill may use:

- Google Drive API
- Google Sheets API
- MCP Tool
- Zapier
- Make.com
- Custom Python Tool
- Claude Tool Use
- OpenAI Function Calling

Success Criteria

The agent should transform:

1-hour discovery meeting into

- ✓ PRD
- ✓ Epic List
- ✓ User Stories
- ✓ Estimates
- ✓ Project Tracker Spreadsheet
- ✓ Shared Google Drive Link

within a few minutes.
